

Welcome to Communitree!

“Nature is directly affected by our choices. The closer you are to nature, the better off nature will be.”

We set out to reinforce the importance of our connection to nature around us, as it is a force that lives alongside us that we take for granted. By giving nature a “voice” through human interaction, we help nature be heard and therefore noticed as an important part of our lives.

Let us know what you think!

T-man says:

Well done on the layout, y'all.

Who are we exactly?

We are a small group of senior college students in the Interactive Media and Design Major at the University of Washington Bothell. CommuniTree is the name of our senior project, an installation that we are holding at the UW campus in Spring, 2016.

Want to know about our project?

Want to know about our project?

CommuniTree is an interactive art installation using real plants to make them react to users when touched. The project can be experienced by anyone from children to adults that walk by our installation on the UWB campus.

The purpose of this installation is to make our users more aware of the connection between humans and nature. Being an art piece, our installation is meant to be interpreted by the viewer in their own way. Its simplistic design should draw forth a deeper thought process from the viewer as they contemplate our installation and enjoy the interaction it provides.

Web-friendly version of our project:

Here you can interact with the plants to your left. The plants will respond to you the way they would in our physical installation.
